Dear Texas Teachers,

This booklet serves as a resource for classroom teachers in Texas who work with the English language learner (ELL) population. Words included were selected from the Texas Essential Knowledge and Skills (TEKS), with the aim of identifying vocabulary that will help students learn content and skills represented on statewide assessments. We hope you find this booklet useful as you incorporate academic vocabulary into your instruction. Thank you for your dedication to providing high-quality education for all Texas students!

Introduction

What Is Academic Vocabulary?

Academic vocabulary refers to the words that are used in academic discourse, both written and spoken, and that traditionally have been identified from a corpus of academic texts. Some lists of academic vocabulary include an indication of each word or word family's rate of occurrence in academic texts (e.g., Coxhead, 2000; Zeno, Ivens, Millard, & Duvvuri, 1995).

Definitions of *academic vocabulary* can differ, depending on the source and context in which the term is used. For the specific purposes of this booklet, we have defined *academic vocabulary* as “the **key words** and **concepts** in the TEKS for English Language Arts and Reading (ELAR) and Mathematics that will help ELLs in grades 5–7

- read and understand text,
- develop subject-matter literacy, and
- demonstrate their knowledge and skills.”

This definition aligns closely with the Teachers of English to Speakers of Other Languages (TESOL) *PreK-12 English Language Proficiency Standards* (Gottlieb, Carnuccio, Ernst-Slavit, & Katz, 2006). TESOL defines *academic language* as language that is “used to acquire a new or deeper understanding of content related to the core curriculum areas and communicate that understanding to others; it is the language that students must use to effectively participate in the classroom environment” (p. 18).

Why Is Academic Vocabulary Important?

National and state data trends indicate that ELLs lag behind their native English-speaking peers in academic achievement. For example, approximately half (56%) of fifth-grade students with limited English proficiency passed the TAKS in reading in 2008, compared with 83% of the statewide fifth-grade population. Nationally, 70% of ELLs read below basic levels (Lee, Grigg, & Donahue, 2007). These gaps occur across the grade levels and in other curricular areas. Although the reasons for the gaps are multifaceted and complex, vocabulary knowledge and acquisition are key factors (August, Carlo, Dressler, & Snow, 2005; Stahl & Nagy, 2006).

The relationships between vocabulary knowledge and comprehension, and language proficiency and reading growth, are well established in the literature. Research has shown a strong and consistent predictive relationship between vocabulary knowledge and reading comprehension across grade levels (Alexander & Jetton, 2000; Nagy, 2005).

However, nonnative English speakers in the upper elementary and middle school grades often face the challenge of learning core content with specialized vocabulary and basic English at the same time (Short & Fitzsimmons, 2007). Students may become fluent in conversational English relatively quickly, but it takes considerable time to develop the vocabulary needed to succeed in school. Many factors influence the rate at which academic English is learned, but research suggests that ELLs require 4 to 10 years to obtain the academic language and vocabulary of their native English-speaking peers (Collier, 1989; Fillmore & Snow, 2000).

This vocabulary challenge must be addressed through **systematic** and **intensive** vocabulary development and language-rich classrooms. A recent review of literature on reading instruction for ELLs found strong evidence to support the inclusion of high-quality vocabulary instruction in a curriculum for ELLs (Gersten et al., 2007). Toward that goal, the review panel recommended the development and adoption of vocabulary lists to help focus instruction on both content-specific vocabulary and common academic words that students may not know (Gersten et al., 2007). In addition, evidence suggests that instructional approaches effective for teaching native speakers can also be used effectively with ELLs (August & Shanahan, 2006; Gersten & Baker, 2000). Teachers also can capitalize on the growing body of literature on effective vocabulary instruction for ELLs (e.g., Carlo et al., 2004).

How Were Terms Selected?

We identified the academic vocabulary in this resource from the TEKS for fifth- to seventh-grade ELAR and Mathematics. A group of educators and researchers with expertise in comprehension, vocabulary, mathematics, and instruction for ELLs developed, reviewed, and refined the lists. The lead team members selected the following types of terms:

- **Specialized vocabulary words** (i.e., content area specific): These words relate to subject matter and concepts that students are expected to know (e.g., *character, decimal*).
- **Nonspecialized, academic vocabulary words**: These words can be found across content areas and in multiple contexts. These words have the potential to build a strong language foundation, especially for ELLs (Beck et al., 2002).
- **Words and phrases that describe how students are expected to demonstrate their knowledge**: These words often are found in the skills outlined in the TEKS student expectations (e.g., the student is expected to *clarify*, the student is expected to *summarize*).

Lists were then reviewed and refined by the advisory group and ELAR and Mathematics teachers who work with the ELL population.

Terms by Grade and Subject Area

The following table shows the number of terms included in this resource by grade level and subject area.

Grade level	ELAR terms	Mathematics terms
Fifth grade	284	140
Sixth grade	277	142
Seventh grade	258	154

By no means do we suggest that you teach **all** of the words included in this resource for your grade level and subject area. We did, however, design the lists to be manageable, should you wish to incorporate most or all of the terms in your instruction. For example, during a school year, a seventh-grade mathematics teacher could address most of the words on the list by teaching approximately four words a week.

How Can I Use This Booklet in My Instructional Planning?

Our goal was to compile terms from the Texas curriculum in a useful format to help teachers plan effective instruction that incorporates academic vocabulary. The lists are intended as a resource and should **not** be considered a mandate for which words to teach. Again, by no means do we suggest that you teach **all** of the included words for your grade level and subject area, nor would it be prudent to teach the words in isolation, out of context.

Use your knowledge of your students and your school's curriculum to determine which words to teach. You may decide to delete or add terms. Terms are organized by TEKS subsection (e.g., Geometry and spatial reasoning in Mathematics), but you may choose to reorganize words to better meet your students' needs.

Consider your students' knowledge of the words when deciding which words to teach. The lists include both specialized terms and common terms with which some students may already be familiar. Also consider the depth of knowledge you want your students to have for a given word—sometimes having some knowledge of a word will suffice, but in other instances, a student may be required to recognize and use the word in a variety of contexts (Beck, McKeown, & Kucan, 2002; Dale, 1965; Graves, 2000; Graves, 2006). Carefully determine whether students must fully understand a word before deciding whether to incorporate it in your vocabulary instruction.

Important Distinctions Between the ELAR and Mathematics Vocabulary Lists

The Mathematics list contains content-specific words from the TEKS, many of which appear on statewide assessments. For example, a sample Mathematics item on a previously released TAKS directly assesses a student's knowledge of *ordered pairs*, *points*, *triangles*, and *circles* (Item = *Locate an ordered pair that represents a point inside both the triangle and circle*; Mathematics TAKS, Grade 6, 2004, released test).

In the ELAR list, on the other hand, the majority of words from the standards represent the **language of instruction** and **not** the academic and descriptive language found in the literature and informational text students will read in class (Nagy & Hiebert, in

press). For example, on a sample ELAR TAKS item, students are not assessed directly on their knowledge of the term *simile*, but they must use their knowledge of other academic vocabulary, such as *thousand*, *raging*, and *danger* to recognize a simile.

Because we cannot predict which words students will encounter in the literature or informational text they read in class, we cannot include such words in this resource. However, **it is imperative that English language arts teachers also address vocabulary found in the classroom literature.**

Many words on the ELAR list represent the language of instruction (e.g., *metaphor*, *character*). Students will encounter other academic vocabulary in the literary and informational text they read in class. Because we cannot predict which words students will encounter in the text they read in class, we cannot include such words in this resource. However, it is imperative that English language arts teachers also address vocabulary found in the classroom literature.

How Do I Teach Academic Vocabulary?

This booklet is not intended to provide in-depth information on how to develop and teach vocabulary. Instead, we offer the following set of guidelines (adapted from Graves, 2000, 2006) to help you become a thoughtful consumer of instructional tools and guide your planning as you incorporate academic vocabulary into your classroom. A few strategies that can be adapted to teach academic vocabulary are listed on the pages following the guidelines.

Direct Vocabulary Instruction

- **Teach specific vocabulary words directly.** There is not one “best” approach to directly teaching academic vocabulary. The method chosen should reflect how extensively you want your students to understand the vocabulary selected (Beck et al., 2002; Graves, 2000).
- **Teach important words in depth.** Integrate the most important academic vocabulary into your instructional routine so that students encounter the words often and have many opportunities to apply their knowledge of the words during reading, writing, and discussion. Focus on the relationship of selected words to important concepts or themes.

Vocabulary Development

Direct vocabulary instruction is important, but it is insufficient and inefficient alone to foster students’ language and vocabulary development. Provide multiple opportunities for students to practice using language in discussions and writing. Ensure that students read often from a variety of text types, heighten students’ awareness of the language in the world around them, and develop the skills of students to learn new vocabulary on their own (Graves, 2000, 2006). Suggestions include the following.

- **Teach word learning strategies.** Teaching students how to use word parts and context to determine the meaning of unknown words has been shown to benefit vocabulary learning (e.g., Baumann, Font, Edwards, & Boland, 2005; Baumann et al., 2002). Many of the words in this resource lend themselves to word study activities such as teaching common root words, prefixes, and suffixes. Teaching students these word foundations can go a long way toward helping students understand related vocabulary words.
- **Foster a love of words and language in your classroom.** If students are aware of the vocabulary around them and actively engage in using new words and seeing the relationships among words, students will take ownership of their language learning.
- **Focus on important content area words and common academic words that may be unfamiliar to ELLs.** In addition to specialized vocabulary, we have included common words, such as *addition* and *setting*, for students who are at the beginning stages of learning English. In this resource, the ★ icon indicates words that appear frequently in the TEKS; that is, they appear across multiple grade levels and standards.
- **Encourage wide reading.** Students do not learn most words through direct instruction. There are simply too many words to teach all unknown words through direct instruction (Nagy & Anderson, 1984). Incidental learning and exposure to new words increase when students have many opportunities to read a variety of texts (Beck & McKeown, 1991; Graves, 2000; Joshi, 2005).
- **Use student-friendly definitions of words and concepts.** Provide a student-friendly definition or have students restate, in their own words, what they think the word means. This activity will help you monitor students' understanding and help them develop a better understanding of the word (Marzano & Pickering, 2005).
- **Capitalize on students' knowledge of their first language.** Using Spanish-English cognates, when appropriate, as part of your vocabulary instruction can provide a springboard for developing students' second language (August & Shanahan, 2006; Hiebert & Kamil, 2005). In the Word Notes column of each list in this resource, the ◆ icon indicates the Spanish cognate for a word. Possible false cognates are also provided, as well as Spanish words that may be more commonly used than the Spanish cognate.
- **Use graphs, pictures, or symbols when appropriate.** This approach is especially useful for mathematical concepts that are difficult to explain verbally but that are well suited to nonverbal explanations.

Direct vocabulary instruction is important, but it is insufficient alone to foster students' language and vocabulary development. Support students' vocabulary development by engaging them in discussions, providing opportunities to read a wide variety of text, and increasing their awareness of language in the world around them. Students must talk, write, and read often to expand their English language proficiency and vocabulary knowledge.

Sample Vocabulary-Building Strategies

The following vocabulary-building strategies can be easily adapted to use for either English language arts or mathematics vocabulary. The words selected are for illustration purposes. The strategies are designed so that other words can be easily substituted.

Analogy

Use math vocabulary words to create analogies. Working in pairs or small groups, have students discuss and complete each.

Sample Analogies

- answer is to solution as question is to _____
(answer: problem)
- circle is to circumference as square is to _____
(answer: perimeter)
- The letter L is to right angle as the letter V is to _____
(answer: acute angle)

Word Scaling

This activity requires students to organize related words. Word Scaling works best when students work together in small groups or pairs. As they organize the words, students practice using the words. In addition, students engage in meaningful discussions about the words and explain the meanings to each other.

Steps for Word Scaling

1. Select a group of words that are related or belong to the same category (e.g., shapes, measurements, types of numbers).
2. Write the words on cards. Make a set of cards for each group or pair of students.
3. Ask students to arrange the cards in a particular order (e.g., smallest to largest, size, degrees).

Sample Word Scaling

When studying the vocabulary term **systems of measurement**:

1. Give each group of students a set of cards with the words: *centimeter, inch, yard, meter, liter, gallon, kilometer, and mile*.
2. Ask students to sort the words into two groups: customary and metric units of measurement.
3. Ask students to sort the words into those that measure capacity and those that measure length.
4. Ask students to place the cards in order from the smallest measurement to the largest.

Semantic Feature Analysis

Semantic Feature Analysis (SFA) is a strategy that can be used to organize visually new concepts and related vocabulary. SFA illustrates the hierarchical relationships in a chart or grid.

Steps for Semantic Feature Analysis

1. Identify the target concept for the chart to teach. The selected concept should be the most inclusive. In other words, it should encompass all the ideas or members of the categories used in the analysis.
2. In the left column, list the most concrete ideas, or members of categories associated with the target concept.
3. Identify the features of words associated with the target concept. List these across the top row of the grid.

Sample Semantic Feature Analysis

Systems of Measurement

	Standard unit	Metric unit	Measures capacity	Measures length	
Centimeter	-	+	-	+	
Inch	+	-	-	+	
Yard	+	-	-	+	
Liter	-	+	+	-	
Meter	-	+	-	+	
Gallon	+	-	+	-	

Rating Word Knowledge

Rating Word Knowledge (RWK) is a graphic organizer, adapted from the work of Blachowicz and Fisher (2009), that can be used to prompt students to think and talk about the vocabulary words they will learn.

Steps for RWK

1. Determine the vocabulary words to be taught.
2. Write the words on the board.
3. Read each word as you point to it.
4. Ask students to write the words in the left column.
5. Ask students to rate their knowledge of the meaning of the word by writing a:
 - 1, if they have never heard or seen the word before
 - 2, if they have heard or seen the word but do not know what it means
 - 3, if they have a general understanding of the word but cannot explain its meaning to others or use it in a sentence
 - 4, if they know the word well enough to explain it to others

RWK promotes metacognitive skills as students monitor their understanding of words and helps students to focus on the important vocabulary words in a chapter or unit.

RWK can also be used after instruction to determine whether students' knowledge has changed. It can provide teachers with information about students who may need additional practice and instruction.

Cognate Connection

When the English language learners (ELLs) in a classroom all speak Spanish as their first language, teachers can use activities that prompt the ELLs to make connections to their native language.

Sample Cognate Connection

English	Spanish
circle	círculo
radius	radio
diameter	diámetro
circumference	circunferencia

Venn Diagram

This activity (Nagy, 1988) can be used to compare and contrast two related vocabulary words.

Sample Venn Diagram

Frayer Model

The Frayer Model (Frayer, Frederick, & Klausmeier, 1969) is a graphic organizer that helps students think about the relationships and categories associated with the vocabulary being taught. Students have an opportunity to explain and elaborate with examples their understanding of a concept or word. The vocabulary word is entered into the central circle and supporting examples, nonexamples, and other information is written into the boxes.

Sample Frayer Models

The labels for the boxes may be changed to better fit the characteristics of the concept being learned. In the following Frayer Model, two of the boxes have been changed to “Characteristics” and “Noncharacteristics.”

Four Squares

Four Squares (Schwartz & Raphael, 1985; Stahl & Nagy, 2006) is an activity used to teach vocabulary words and the concepts they represent. Working in pairs, have students discuss and complete each of the squares.

Sample Four Squares

Word	Examples
affix	un- (<u>undone</u>) mis- (<u>misunderstand</u>) -ness (<u>happiness</u>) -ly (<u>calmly</u>)
Definition	Nonexamples
A group of letters added to the beginning or end of a word to change its meaning or use	misery run

Possible Sentences

Possible Sentences (Stahl & Kapinus, 1991) is both a prereading and postreading activity that can be used with a wide variety of texts, including narrative and expository passages.

Steps for Possible Sentences

1. Introduce the text and activate students' prior knowledge.
2. Select six to eight words from the text that your students likely do not know. Preferably, select words that represent key concepts and ideas from the passage.
3. Select five or six words that your students likely know.
4. List all of the words on the board. Discuss the meaning of the words, engaging students in discussions and providing student-friendly explanations.
5. Ask students to work in pairs to create sentences that use at least two of the words and that are similar to the sentences in the passage.
6. Write student sentences on the board.
7. Read the passage aloud to students or have them read it on their own.
8. After the reading, discuss whether the sentences on the board are similar to those found in the passage.
9. Discuss and guide students in changing some of the sentences so that they reflect the information from the reading.

Sample Possible Sentences

- Difficult/unknown words:
 - adage
 - ambiguous
 - coherent
 - compile
 - conflict
 - context
 - emphasis
 - perspective
- Easier/familiar words:
 - audience
 - comparison
 - conclusion
 - purpose
 - summary
 - unfamiliar
- Sample sentences:
 - The audience enjoyed listening to the storyteller's old adages.
 - The conclusion of the story was quite ambiguous.
 - The purpose of the writing will change, depending on the author's perspective.

Sample Word Lists

When teaching vocabulary and working with a population of English language learners, it may be helpful to consult lists of the most common words in the English language. Below are a few such lists. Keep in mind that many of the terms in this booklet are specialized, content-specific vocabulary and may not appear on the lists of “most frequent” words.

Academic Word List

Averil Coxhead (2000) compiled the Academic Word List (AWL), the 570 word families most frequently used in a corpus of academic texts. The list focuses on academic words and thus excludes the most common 2,000 words. The list is organized into 10 sublists in order from the most to least frequent word families. The lists can be found on Coxhead’s Web site: www.victoria.ac.nz/lals/resources/academicwordlist

Word Zones

Published as part of Dr. Freddy Hiebert’s Text Project, Word Zones (2005) includes 5,586 of the most frequently used words, grouped into four zones of approximately 300, 500, 1,000, and 2,000 words. Download the list for free at: www.textproject.org/resources/word-zones-list

Also available on the Text Project Web site is “The 1,000 Most Frequent Words in Middle-Grade and High School Texts”: www.textproject.org/resources/word-list

How Do I Decide Which Words to Teach?

Selecting words to teach is an important component of vocabulary instruction. We offer a summary of guidelines developed by Beck et al. (2002) and Nagy and Hiebert (in press) below; we encourage you to explore these publications to find examples and additional explanations.

- **For in-depth instruction, select words that are important for understanding the “big ideas” in the lesson** (e.g., overarching concepts in mathematics). Focus on words that are both important and useful. By selecting words that students will frequently use and read, you help to build a strong vocabulary foundation.

- *Select words that are domain specific and critical to understanding the topic, even if those words are not particularly useful (e.g., polygon).*
- *For ELLs, also select words that may not be critical to comprehending a particular text but that are commonly encountered across the content areas.* For example, words like *categorize* and *process* are used across many content areas but are often not the focus of instruction because they are not central to a text or a specific content area. Teaching such words can greatly benefit ELLs' vocabulary development.

Instructional time is valuable. Time allocated to in-depth vocabulary instruction should focus on the most useful words to students as they read, write, and discuss across the content areas.

Notes About the Word Lists

1. Words are organized by TEKS category. Words found in multiple categories are placed in the most logical or relevant category. When the same word appears in different categories in different grade levels, the alternate category is noted in parentheses next to the knowledge and skills number.
2. A check mark (✓) indicates that a word is used in the TEKS for that grade level and that a **sample** student objective is listed. In some instances, a word is found in only one or two of the three grades reviewed (thus, the blank columns for other grades). In some cases, a word is found in the TEKS for fifth and seventh grades but not for sixth grade.
3. If teaching related words in conjunction could enhance concept learning, those words are listed together.
4. We included only words from the standards themselves (i.e., the knowledge and skills statements). We did not list words used to describe the intent or purpose of the standards.
5. Examples and notes are provided in the Word Notes column. For example, the entry for *point of view* includes a note about the various types addressed in the TEKS (e.g., first person, third person, omniscient).
6. High-frequency words in the TEKS (those that appear often and across grade levels) are marked with the ★ icon.
7. Spanish cognates are marked in the Word Notes column with the ♦ icon.
8. To clarify the intended use of a word, examples are provided and words with subject-specific meanings are noted in the Word Notes column when appropriate.
