Exploring The Mathematical Process Standards

Exploring The Mathematical Process Standards (continued)

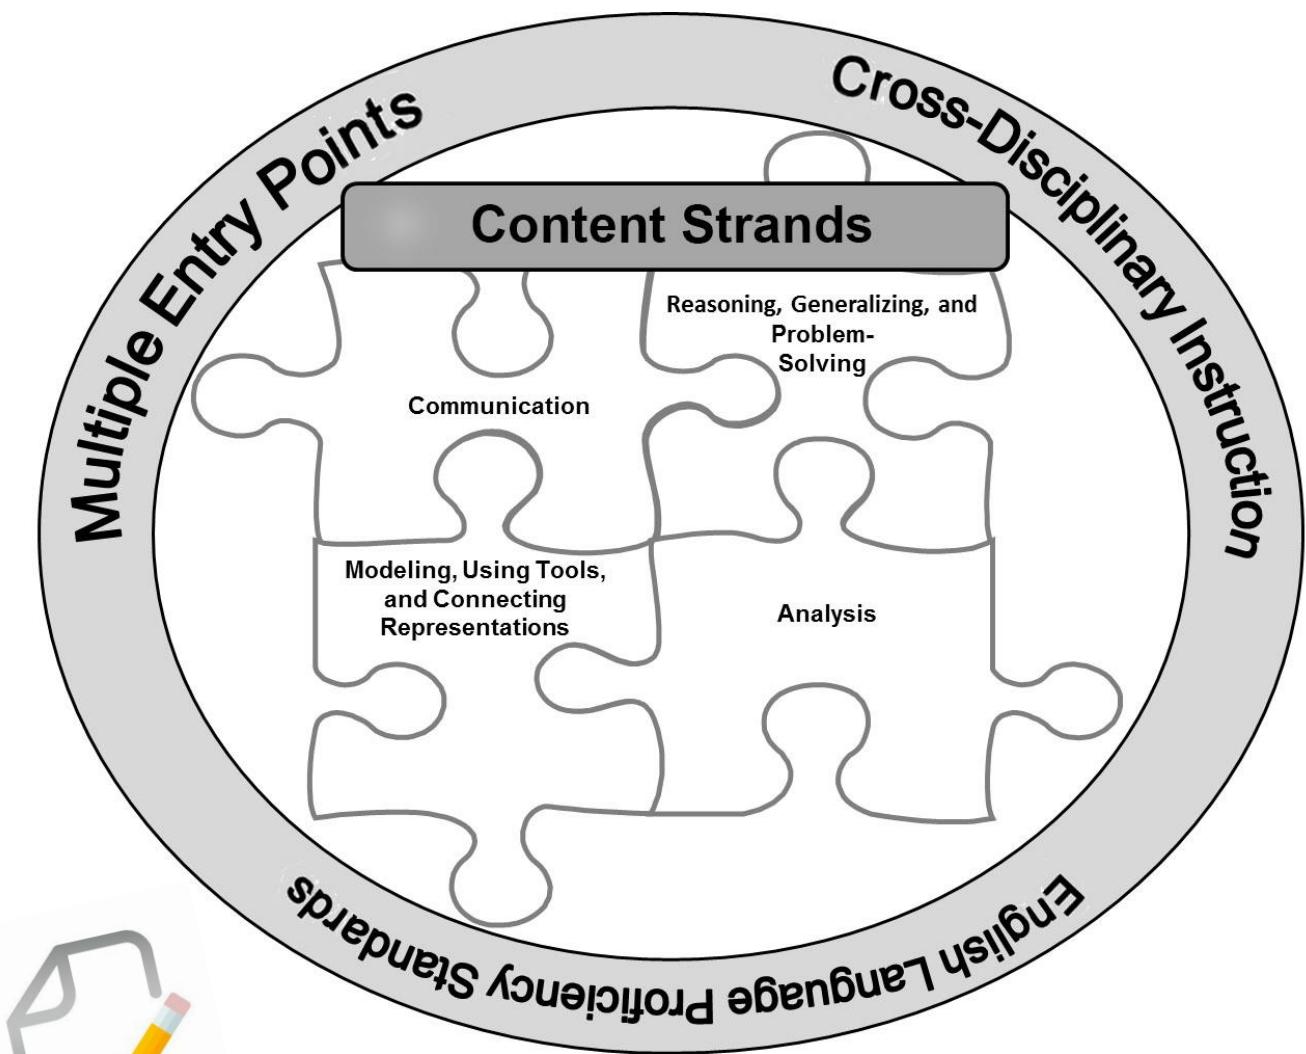

Mathematical Process Standard	Summarized
The student is expected to apply mathematics to problems arising in everyday life, society, and the workplace.	
The student is expected to use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution.	1.
The student is expected to select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems.	2.
The student is expected to communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate.	
The student is expected to create and use representations to organize, record, and communicate mathematical ideas.	
The student is expected to analyze mathematical relationships to connect and communicate mathematical ideas.	3.
The student is expected to display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.	

How might the new mathematical process standards support learning in your classroom?

Vocabulary Notes

ELPS	Cross-Disciplinary Instruction	Multiple Entry Points	Levels of Cognitive Demand
<p>The English Language Proficiency Standards (ELPS) outline the instruction school districts must provide to English language learners in order for them to have full _____ to learn English and _____ academically. The ELPS are to be implemented as an integral part of the instruction in each _____ and _____ subject of the TEKS. Effective instruction and second language acquisition involves giving English language learners opportunities to listen, speak, read, or write at their _____ level of English language development in _____.</p>	<p>This term refers to skills and processes that cut across _____ disciplines (English/language arts, reading, math, science, and social studies). Related standards are found in the _____.</p> <p style="text-align: center;">CCRS</p> <p>The CCRS (College and Career Readiness Standards) includes the _____ and _____ Standards and is a resource designed to help students, parents, teachers, and counselors understand the specific _____ knowledge and _____ skills necessary for college and career readiness. The cross-disciplinary standards are organized into two major areas: Key _____ Skills and _____ Skills.</p>	<p>Tasks with _____ entry points are those which have varying degrees of _____ within the task, or provide students with varied _____, _____, and _____ to actively participate in the task.</p>	<p>Tasks that command engagement with the concepts and that encourage students to make connections leading to different opportunities for student thinking, such as _____ tasks, procedures _____ connections tasks, procedures _____ connections tasks, and _____ mathematics tasks.</p>

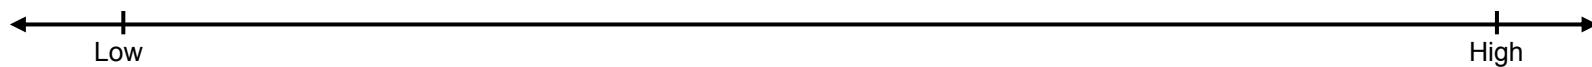

Since the process standards are mentioned in each Knowledge and Skills statement, how does that impact students' acquisition and demonstration of their mathematical understandings?

Examining Amplified Instructional Task 1

Task: _____

		Communication	Reasoning, Generalizing, and Problem Solving	Modeling, Using Tools, and Connecting Representations	Analysis
Instructional Strategies	English Language Proficiency Standards				
	Multiple Entry Points				
CCRS	Cross-Disciplinary				

Mark your perceived level of cognitive demand for this task on the continuum below:

Amplifying Instructional Tasks – Algebra I Example

Considerations for Brainstorming				
Consider the revised TEKS in the Original Task	Consider the related SEs	Consider the Context	Consider the Student	
Guiding Questions	<p>What main concepts and/or skills are involved in this task?</p> <p>What are related concepts and/or skills?</p>	<p>What else might be explored or applied?</p> <ul style="list-style-type: none"> • Additional mathematical ideas from related student expectations • Process standards • Grade level connections 	<p>Real-World Context</p> <p>What else could be explored within this context? What related ideas could be added?</p> <p>Is there a real-world context for this idea?</p>	<p>What Tier I differentiation may be needed to reach the student who is</p> <ul style="list-style-type: none"> • struggling, • learning English, and/or • advanced?
			<p>Mathematical Context</p> <p>Are there different starting points for the problem?</p> <p>How else could the material be presented?</p>	
Brainstorming	<p>Main Concepts and/or Skills</p> <p><i>Identify key attributes of a quadratic function A(7)(A)</i></p>	<p>Process Standards</p> <ul style="list-style-type: none"> • Process standards A(1)(A)-(G) 	<p>Context</p> <ul style="list-style-type: none"> • <i>How does the student thinking differ if the graph is presented first? Or the table?</i> • <i>What is the meaning of the points of a quadratic function when placed in a context?</i> • <i>What are the reasonable domain values when given a context?</i> 	<p>Struggling</p> <ul style="list-style-type: none"> • <i>Model the use of additional tools (hands-on, pictures).</i> • <i>Model the use of a table to look for a pattern.</i>
	<p>Related Concepts and/or Skills</p> <p><i>Everyday life A(1)(A)</i></p>	<p>Content Standards</p> <ul style="list-style-type: none"> • <i>Write quadratic functions using technology and make predictions A(8)(B)</i> • <i>Write quadratic functions given real solutions and graphs of related equations A(6)(C)</i> • <i>Write domain and range of quadratic functions using inequalities A(6)(A)</i> 		<p>Learning English</p> <ul style="list-style-type: none"> • <i>Provide sentence stems and frames.</i> • <i>Provide opportunities to speak.</i> • <i>Pre-teach vocabulary.</i>

Amplifying Instructional Tasks – Geometry Example

Considerations for Brainstorming				
Consider the revised TEKS in the Original Task	Consider the related SEs	Consider the Context	Consider the Student	
Guiding Questions	What main concepts and/or skills are involved in this task? What are related concepts and/or skills?	What else might be explored or applied? <ul style="list-style-type: none"> Additional mathematical ideas from related student expectations Process standards Grade level connections 	<p>Real-World Context What else could be explored within this context? What related ideas could be added?</p> <p>Is there a real-world context for this idea?</p> <p>Mathematical Context Are there different starting points for the problem?</p> <p>How else could the material be presented?</p>	What Tier I differentiation may be needed to reach the student who is <ul style="list-style-type: none"> struggling, learning English, and/or advanced?
	Main Concepts and/or Skills <i>Find area of regular polygons G(11)(A)</i>	<p>Process Standards</p> <ul style="list-style-type: none"> Process standards G(1)(A)-(G) <p>Content Standards</p> <ul style="list-style-type: none"> Apply the relationships in special right triangles $30^\circ-60^\circ-90^\circ$ and $45^\circ-45^\circ-90^\circ$ and the Pythagorean theorem, including Pythagorean triples, to solve problems. G(9)(B) Determine the area of composite two-dimensional figures comprised of a combination of triangles, parallelograms, trapezoids, kites, regular polygons, or sectors of circles to solve problems using appropriate units of measure. G(11)(B) 	<p>Context</p> <ul style="list-style-type: none"> How can area be used to determine dimensions? How could triangle properties be used to find lengths needed to calculate area? How do you determine the amount of material needed for construction? 	<p>Struggling</p> <ul style="list-style-type: none"> Model the use of additional tools (hands-on, pictures). Model the use of a table to look for a pattern. <p>Learning English</p> <ul style="list-style-type: none"> Provide sentence stems and frames. Provide opportunities to speak. Pre-teach vocabulary. <p>Advanced</p> <ul style="list-style-type: none"> Explore different pricing. Explore how a change in amount of material affects the dimensions of the stage.
